

The background is a vibrant purple with a dense halftone dot pattern. A large, dark purple, textured shape resembling a stylized anime character's head or a mountain peak is centered behind the logo. The background is further decorated with various geometric elements: a white triangle in the top left, a pink-to-orange gradient shape in the top right, a yellow-to-green gradient shape in the bottom left, and a white triangle in the bottom right. White line art, including a circle and several overlapping polygons, is scattered across the scene.

funimation®

# SPACING & SIZING

To give space to our primary logo, we use “clearspace” when applying the Funimation wordmark. The margin is equal to the base height of the letterforms, marked by “x.”

For legibility, we never make the Funimation wordmark smaller than 90px in digital, and 1 inch (2.54cm) in print.

# COLOR

The Funimation wordmark should only appear in Ultraviolet, White, or Black.

X		X
X		
X		X

  
Digital: 90px  
  
Print: 1" (2.54cm)

# MISUSE GUIDELINES

- Do not change the wordmark color to anything other than the approved brand colors.
- Do not distort or wrap the wordmark in any way.
- Do not create a forced outline version of the wordmark or add a stroke.
- Do not apply reflections or shadows to the wordmark.
- Do not angle the logo or use vertically reading downward.
- Do not apply any bevel effects to the wordmark.

# FOOTAGE WATERMARK

The Funimation wordmark should be applied as a Watermark to brand all show and collateral visual/video assets—like interviews, behind-the-scenes, performances, and live events (i.e. screenshots).

The wordmark should appear in White at a 50% opacity with a black drop shadow blurred to 97%. Watermark placement is in the upper right corner and should keep our standard wordmark clearspace outlined above.

When designing for small scale, (e.g. thumbnails) we can omit the watermark, opting for more visible branding.

# HIERARCHY

## Primary Color

### ULTRAVIOLET

As our main brand color, this bold purple dominates the overall color impression of layouts. This is our environment that houses all other elements.

## Secondary Colors

### BLACK, WHITE

Our secondary colors of Black and White are used as balancing elements, aligning the compositional weight and creating a flexible structure to promote IP.

White pulls key visuals and screenshots into the foreground, elevating our content without infringing upon it. Black houses text, logos, and other elements which may require additional clarity.

## Tertiary Colors

### PINK, YELLOW, RED, GREEN

Pink, Yellow, Red, and Green serve as our accent colors—guiding the eye, indicating movement, directing visual tension, prompting user interaction, etc. These colors should comprise no more than 33% of the overall backing layout in total.

You'll see green used for button rollover styles and hyperlinks (when against black), but we *never* use the other tertiary colors for text, iconography, or interactive elements. When in doubt, rein it in.

# LAYOUT RATIO GUIDE

# BRAND FONT SYSTEM

Our Funimation brand font system maintains impact and consistency across digital and print. Whenever possible, we use Integral CF bold for headers and links while using the Prompt family for everything else. If you’re on a platform that doesn’t support Integral CF, Prompt Extra Bold can be used in place.

## INTEGRAL CF

Demanding immediate attention, Integral CF uses superbold letterforms for maximum visual and emotional impact. As an all-caps titling font, it is the perfect font for punchy headers and pairs well with our lighter body copy font, Prompt.

INTEGRAL CF BOLD  
ABCDEFGHIJKLMN  
OPQRSTUVWXYZ  
ÆØÅÜ.,!?#@&  
1234567890

## PROMPT

Prompt is offered by Google as a free font family. It works best with text that has wide proportions and airy negative space. Combined with Integral, our typography tells our fans we’re bold yet approachable.

Prompt Regular  
ABCDEFGHIJKLMNOPQRSTUVWXYZ  
abcdefghijklmnopqrstuvwxyz  
ÆØÅÜæøåü.,!?#@&1234567890

*Prompt Italic*

# TYPE HIERARCHY

We use typography to create hierarchy and build visual cohesion. This outlines the basic relationships between our typefaces and the levels of information. While a solid starting point, these font sizes are guidelines and will possibly differ depending on specific creative needs.

\* Leading Ratios refer to the relationship of the font size to the height of its line spacing. (For example, a 16pt font with a Leading Ratio of 1.5 would result in a 24pt leading value.)

**HEADER**  
Integral CF, Bold  
Size: >72pt

# INTERACTIVE ELEMENTS

Whether used in buttons or as a standalone link, CTA or “call to action” text should always be set in Integral, Bold, and All Caps. Hyperlinks in copy blocks should conversely stay within the family, using Prompt Bold instead.

For accessibility, buttons and their hover states should only appear in the following color pairings and styles. The point size of the copy and the padding should remain consistent across a given use-case, so only the width of a button will fluctuate.

# BACKING HALFTONES

Forming the base of our design, our backing halftone content should correspond to the foreground art element. If this is not allowed by the licensor, we can always fall back on a general use texture. When generating new black and white halftone screen bitmaps from images, use Round shapes at an angle of  $-30^{\circ}$ . Scale isn't ultra important—just make sure the texture is visible and we're reasonably consistent across the project.

While created as a textured base for the other elements, we use our halftones to define solid shapes against the backing purple. For this reason, halftones should always be masked inside of an equilateral triangle or circle unless character art (which already has a defined shape.) Triangular masks should never point directly left, right, up, or down—keep them dynamic and at an odd angle.

To further establish our sense of scale, these masks should always fall off the edge and show two or three areas where the edges intersect. Set everything to Multiply (to knock out the white) and we're done!

# GRAPHIC OBJECTS

## Warped Outline Text

Let's start off groovy. Using Adobe Illustrator's "Rise" effect as our base warp method, we can quickly and easily modify short copy to fit any composition.

If oriented extremely vertically, make sure the copy reads upwards (with the end of the word closer to the top of the composition.) Use no more than one instance of this object, unless the design is very long and narrow (emails, lanyards, etc).

Because this object is custom tuned to every composition, it is the only asset not included in the Funimation Brand Adobe Library. You can find the working file inside the Objects folder of the Graphics Package.

# GRAPHIC OBJECTS

## Gradient Shapes, Scanlines

These large, bold shapes are major drivers of composition, with the option of housing a masked scanline pattern within them. This scanline pattern should never rotate—keep it at the base 45°, the lines shrinking as we move down and to the right.

While base Pink or Green, these shapes should each have a Yellow gradient individually overlayed. We can choose whatever angle we like, but to create a “light source” for the composition and further push the depth, we’ll need to be consistent. Gradient size and position can vary, just as long as both colors are apparent.

Try and stick to one or two large shapes per composition, unless the design is very long and narrow. Regardless of number, these shapes should never overlap one another. Just like our halftones, keep our equilateral triangle shapes and masks dynamic by pointing them in non-cardinal directions. Feel free to omit this element if the composition’s subject is negatively impacted.

# GRAPHIC OBJECTS

## White Triangles

While tempting to pepper our designs with these accent pieces or use them to house other elements, this layer should generally only contain between one and three medium-sized equilateral triangles. These aren't confetti, and should instead be seen as balancing elements.

While they should never intersect with one another, position over the edges of multiple other elements whenever possible to really push the sense of depth. And as always, keep these triangles off-kilter!

# GRAPHIC OBJECTS

## Black Fields

Just one more triangle for you, I promise!

Whether using these black fields to house copy against a busy background or to cement the bottom of a top-heavy unit, don't let two fields intersect with each other. Let's also shy away from using a black rectangle and black triangle in the same composition, if we can avoid it. While otherwise completely malleable, the black rectangle field should always be longer than it is tall and never rotate.

# CONTENT BORDER FRAME

If the rest of the visual system lets us color outside the lines, it's time for paint by numbers. Licensed content at the forefront of our compositions is fiercely guarded by our licensors and needs to be 100% uncropped and visible—elevated by and clarified against our backing design. To push this distance and further highlight our subject, we incorporate a white content border frame. With a crisp edge and offset at an angle of 135°, this fancy drop shadow uses a variable thickness: 5% of the content's shortest dimension.

For content that we are able to crop, such as photos and commissioned artwork, keep to a rectilinear shape—this will create a visual hierarchy against the circles and triangles of our backing imagery.

## OUR WORLD IS YOURS

COMING THIS SEASON  
A First Look at *Fruits Basket* Season 3

Tohru Honda thought her life was headed for misfortune when a family tragedy left her living in a tent. When her small home is discovered by the mysterious Soma clan, she suddenly finds herself living with Yuki, Kyo, and Shigure Soma. But she quickly learns their family has a bizarre secret of their own: when hugged by the opposite sex, they turn into the animals of the Zodiac!
